SUMMARY

Engineering student who builds practical AI-powered tools and full-stack applications, from LLM workflows to deployed web apps. Strong in Python and JavaScript, with a focus on identifying real user friction and shipping simple, usable solutions.

EDUCATION

Bachelor of Technology, SRM Institute of Science and Technology 2023 – 2027
Computer Science Engineering w/s AI/ML
8.65/10.0 CGPA

SKILLS

Programming	Python, Javascript, SQL
Libraries	Pandas, Numpy, Scikit-learn, PyTorch, TensorFlow/Keras
Backend	Node.js, Express.js, REST APIs, FastAPI, WebSockets
Frontend	React.js, Next.js, HTML, CSS, Tailwind CSS
AI/ML	Machine Learning, Deep Learning, Transformers
Generative AI	LLMs, LangChain, LangGraph, RAG
Databases	MongoDB, MySQL
Deployment & Tools	Git, Docker, Vercel, Render

PROJECTS

Hybrid Explainability for Chest X-Ray Analysis Jan 2026
Python • PyTorch • DenseNet121 • Grad-CAM++ • Streamlit • LangChain • Gemini API

Developed a **multi-label chest X-ray classification system** using DenseNet121 to predict thoracic pathologies. Integrated **Grad-CAM++** to visualize disease-relevant regions and improve model interpretability. Built an interactive **Streamlit application** with a Gemini-powered LLM module to generate structured radiology explanations and diagnostic summaries. GitHub

BuildBazaar — Full-Stack E-Commerce Platform April 2026
React • Node.js • Express.js • MongoDB • Redis • JWT • Socket.IO • REST APIs • Gemini API

Developed a **full-stack e-commerce platform** using React, Node.js, Express.js, and MongoDB with secure **JWT authentication** and Role-Based Access Control (RBAC). Designed **RESTful APIs** for product, order, user, and quotation management. Integrated **Redis caching** to reduce database queries and improve response times. Implemented product search, shopping cart, checkout, real-time notifications, and AI-powered recommendations. GitHub

DebateForge — Real-Time AI Debate Platform Feb 2026
Next.js • FastAPI • Ollama • LLaMA 3.2 • TypeScript • Web Speech API

Engineered a **real-time full-stack AI debate system** enabling multi-agent argument generation with low-latency transitions. Designed a **prefetch-based pipeline** overlapping inference and speech, reducing response delay by **30%**. Optimized local LLM performance using **context reduction (4096→2048), warmup, and keepalive**, improving token speed by **15%** and eliminating cold starts. Integrated **fallacy detection and argument reconstruction** for uninterrupted real-time interaction. GitHub

CERTIFICATIONS & HONORS

Finalist, Schneider Electric Hackathon Certificate

Red Hat Certified Specialist in Containers Credential

SAP Generative AI Developer Credential

Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate Credential

PUBLICATION

Deep Learning for Inflation and Oil Price Forecasting: A Comparative Study of LSTM and Transformer Models for Macroeconomic Policy Analysis

Publication: Springer | **Conference:** ICIDA 2025
